

Realistic non-IID deployment

15 clients hold valuable local data, but weaker-device clients are the majority.

A: Exclude
weak clients
5/15 data
fastest, but loses
non-IID coverage

B: Full inclusion
all clients rate 1.0
15/15 data
direct baseline, but
often infeasible

**C–E: Submodel
inclusion**
weak clients rate 1/8
15/15 data
practical inclusion path
